

Field Quality Representative - Mobile App Flow

This chart illustrates the step-by-step operational flow for representatives conducting field quality audits on site, from passcode authentication to clock-out submissions.

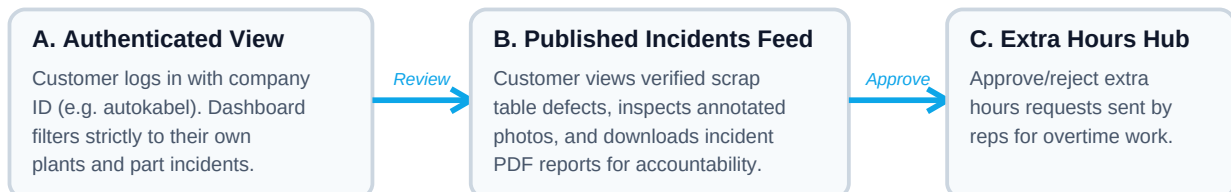

Web CRM Dashboard & Operations Flow

This chart outlines the workflow of quality leads, administrators, and accountants managing the operation, verifying floor audits, processing payroll, and billing clients.

CUSTOMER PORTAL & TRANSPARENCY WORKFLOW

Real-Time Synchronization Data Flow Architecture

1

Mobile Local Commit

Rep logs suspect material. Local database commits it immediately to SQLite/WatermelonDB (instant responsiveness).

2

Async Cloud Storage Upload

Mobile app uploads annotated photo assets directly to secure cloud storage (AWS S3) to resolve image path URLs.

3

Database Persistence Write

Mobile sync engine uploads JSON payload with photo URL. API server commits it to Supabase PostgreSQL.

4

WebSockets Event Trigger

API server broadcasts 'ids_pulse_db_update' signal via WebSocket protocol to active manager dashboard sessions.

5

Reactive Dashboard Rerender

Web dashboard receives sync broadcast, fetches latest updates, plays synthesizer bell chime, and displays notification toast.
